Modular Scanner Building Completed at Genesis Medical Imaging

Dedicated MRI Scanner gives one of kind testing and service capabilities

Genesis Medical Imaging, in addition to dedicated CT Bays, recently completed an unparalleled modular building housing a complete GE Signa LX 1.5T MR system. Having a working dedicated MRI system on-site provides unequalled continuous access.

The engineers and repair personnel at Genesis Medical Imaging have around the clock access to the scanner for diagnostics, coil testing, functionality testing, and education, all in a virtual clinical working environment. Personnel can work and test on this scanner as opposed to scanners in the field, which would cost a customer due to down-time Not sure what you meant here. For optimum performance, all repaired CT and MRI parts are tested and validated through QA testing on our CT bays and modular MRI to simulate a clinical environment and conditions.

Ron Ragan, Vice-President of Genesis, states, “By installing this scanner, we have invested in our customers like no one else has. Having an on-site scanner allows us, unlike other vendors, to field test in-house. This allows us to conduct all testing and validation before parts or coils leave our facility. We can ensure 100% reliability and functionality. We confirm that we meet or exceed OEM standards before shipping. “

Genesis Medical Imaging is the largest independent service organization that offers a total solution to CT and MRI needs, including nationwide service contracts, mobiles, refurbished CT & MRI equipment, Cryorefrigeration, and Magnet services.
